

TRANSFORM CAMPUS SECURITY WITH SITUATIONAL AWARENESS

Connect existing security technology into one common operational picture.

The Ronin Platform is a situational awareness delivery platform that can transform the way security organizations respond, support and manage their security environments. Our platform ties together the various security technologies and people to create proactive problem resolution.

CHALLENGE

Multiple systems with limited communication between them.

There is a rapidly increasing array of single-function security systems in the market today. These 'point solutions' address one to two functions of public safety with limited flexibility and visibility to other security solutions or legacy systems. It falls to event organizers to manually connect data from these disparate systems and then communicate that data to their varied security teams. Most security systems also rely on alarms or calls to initiate an investigation after an incident has occurred. These systems do not communicate or collaborate with other technologies or agencies in the security environment.

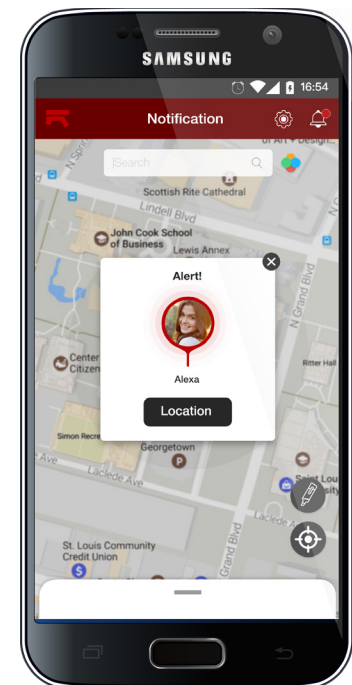

SOLUTION

System integration to create proactive solutions.

The Ronin Platform is a situational awareness delivery platform that can transform the way security organizations respond, support and manage their security environments. Our platform ties together all the various security technologies and people to create proactive problem resolution. It is a force multiplier that allows security organizations to leverage and connect all of their existing security technologies into one common operating picture delivering real-time information and multi-directional communications providing a clear picture of any incident under your command.

Ronin can integrate and aggregate everything you already have--data from the IoT, your sensors and legacy systems, and your people--to allow for meaningful, real-time decision making.

SECURITY OFFICER APP

"Making the right decision at the right time unleashes the unrealized value of a business."

THE RONIN PLATFORM™

IN YOUR ENVIRONMENT

SCENARIO

A student is walking alone on campus at night. She feels uncomfortable because someone is following her. She doesn't want to call 911. But she would like to know a safe place to go or if there is a security guard nearby.

With the Ronin Platform, campuses are armed with a complete security solution including apps on student and faculty mobile devices, location maps, real-time chat sessions to decrease resolution time and create safer outcomes.

If our student had the Ronin app on her phone, she could trigger a "soft" alarm to alert campus security to her location and her concerns. With Ronin, the communication doesn't stop there. The security ops center can immediately respond to the student via text and can answer her questions or concerns until she is out of harm's way.

In addition, the Ronin Platform provides the entire security team with a common operational picture centered around geospatial mapping and real-time access to sensors and communication. Now the security ops center can instantly locate the nearest patrol, and they can activate cameras or lights in the student's area. Security can even telestrate over a map or image to quickly draw a route to safety for the student, helping her find a safe place to stay until the patrolman arrives.

KEY FUNCTIONALITIES

- + **GEOSPATIAL INFORMATION** – THE RONIN PLATFORM CAN DISPLAY ALL THE DATA ACROSS GEOSPATIAL CONTENT, SUPPORTING DISTRIBUTED OPERATIONS.
- + **EXTENDED NETWORK** – RONIN EXTENDS THE TRADITIONAL IP NETWORK TO THE VERY EDGE OF OPERATIONS, OVER THE CELL, WIFI OR SATELLITE.
- + **COLLABORATION** – RONIN PROVIDES TOOLS FOR SHARING CRITICAL DATA, LOCATION AND EVEN TELESTRATION.
- + **COMMUNICATIONS** – RONIN PROVIDES A ROBUST ARCHITECTURE THAT CAN USE CHAT, VOICE AND OTHER TOOLS.
- + **MULTI-DIRECTIONAL** – RONIN ALLOWS FOR INFORMATION TO BE SHARED BOTH WAYS; TOP DOWN AND BOTTOM UP.
- + **DATA VISUALIZATION** – RONIN PROVIDES A PLATFORM FOR EASILY VISUALIZING DATA AND FUSING TOGETHER DATA SOURCES.

SUMMARY

At its core, the Ronin Platform delivers real-time communication and data in a way that allows security operations to make quick informed decisions that will ensure safety and protect campuses like never before.

ABOUT

The Ronin Platform was developed to maximize the value of existing technology by intelligently integrating data yielded from all sources to minimize the gaps in your operational picture.

At Coolfire Solutions, we create, design and innovate at the edge because we thirst for progress--the kind of progress that transforms life and business in a meaningful way. We embrace ingenuity to get the job done. We sprint for milestones to quickly show returns. With the right information in the right hands right now, action can be taken and innovation occurs.
